DEEPCODE

DeepCode is an AI-based code review platform that uses machine learning to analyze code and detect potential bugs, vulnerabilities, and security issues.

Snyk Code

Secure code with a developer-friendly experience. Snyk Code uses a revolutionary approach designed to be developer-first. Conventional Static Application Security Testing (SAST) tools are limited by lengthy scan times and poor accuracy, returning too many false positives, and eroding developer trust. Snyk Code makes developer efforts efficient and actionable. Snyk Code is powered by the DeepCode engine. Snyk Code is free for OSS and offers an amazing free plan for private repos.

MINTLIFY

Create the documentation you desire with ease. It is visually pleasing by default, simple to maintain, and designed to enhance user engagement.

The screenshot shows the Mintlify website's homepage. At the top, there is a navigation bar with links for Documentation, Showcase, Pricing, Community, and Writer. To the right of the navigation bar is a "Get Started" button and a light/dark mode toggle switch. Below the navigation bar, there is a large green circular icon. The main headline reads "Beautiful documentation that converts users" with a green underline. A subtext below it says "Build the documentation you've always wanted. Beautiful out of the box, easy to maintain, and optimized for user engagement." Below the headline, there are logos for various companies: Y Combinator, EXPLO, mindsdb, kana, corrily, webapp.io, Sieve, vital, Tolstoy, and relate. At the bottom of the page, there are four screenshots of different documentation pages: a mobile app interface, an EXPLO dashboard, a MongoDB interface, and an elementary OS interface.
